Gemini Enterprise at Kuwait University

Faculty orientation and a practical guide to secure academic AI

- Portal: **ai.ku.edu.kw**
- Your data, research and drafts are never used to train any model, and never sold
- Searches across your KU OneDrive and Outlook

Where we already are

The programme approved for this semester — before a single session of training

50 FACULTY

Across **11 colleges** — Science to Law, Pharmacy to Architecture

2,076 STUDENTS

Seats approved for the autumn term

68 COURSES

From first-year foundations to graduate seminars

EVERY LEVEL

100s **18** · 200s **17** · 300s **9** · 400s **18** · Graduate **6**

This is not a pilot in one department. It is the whole university, in one term.

Eleven colleges, one cohort

Faculty and approved student seats, autumn term

College	Faculty	Seats
Science	14	406
Engineering & Petroleum	12	279
Business Administration	5	280
Life Sciences	5	215
Allied Health Sciences	4	276
Arts	3	215

College	Faculty	Seats
Education	2	130
Pharmacy	2	110
Social Sciences	1	100
Law	1	45
Architecture	1	20
Total	**50**	**2,076**

What colleagues are actually building

ONLY POSSIBLE INSIDE THE KU TENANT

Custom AI tutor on her own course materials — Manal Alsaad

AI as a board member in a governance role-play — Majdi Quttainah

AI AS THE OBJECT OF STUDY

Critiquing AI-generated statistics — Hesham Gadelrab

Accessibility audits that find where AI fails — Zainab Almeraj

Prompts and verification submitted with the work — Sally Abdelrahman

KUWAIT, IN ARABIC

Arabic-language pedagogy — Hend Almaian

Desalination plant modelling — Khawla Alshayji

Environmental impact assessments — Abdullah Husain

REACHING PAST THE CAMPUS

Lessons that reach MOE schools — Wafaa Al-Mezel

Graduate simulation modelling — Abdullah Alibrahim

The #1 issue: multiple Google accounts

A personal @gmail.com session in the same browser triggers "Access Denied" loops

THE FIX

1. Create a separate Chrome profile for **name@ku.edu.kw**
2. Confirm the profile avatar shows your KU account
3. Enter via **ai.ku.edu.kw**

Still blocked? Support form: **bit.ly/ku-ge-rs**

Choosing the right tool

CHAT

Drafts, syllabus editing, brainstorming, translation

DEEP RESEARCH

Multi-step web research with cited sources

NOTEBOOK ENTERPRISE

Answers only from the sources you add. Enter via **ai.ku.edu.kw** — not the free public link

AGENTS

Pre-configured assistants, called with **@** — e.g. syllabus FAQ, policy lookup

Connectors — why ours is not the free one

The assistant can read KU's own content, inside KU's tenant

AVAILABLE NOW

Outlook — mail and calendar

OneDrive — your files

SharePoint — committee papers, bylaws, departmental archives

COMING SOON

Teams — chats, channels and the files shared in them

LATER

A **Moodle** connector, and more after it. We will announce each one as it goes live

HOW YOU USE ONE

Nothing to learn. Ask in plain language and the connected sources are searched for you:

```
What did the Dean send me about the exam schedule?
```

Tip — check the connector is switched on before you rely on it, and switch one off when you do not want it searched.

Flash or Pro — choosing the model

Start with Flash. Move to Pro when being wrong is expensive

	Flash	Pro
Good for	Summaries, drafts, translation, quick answers, reformatting	Multi-step reasoning, analysis, code, research synthesis
Speed	Immediate	Slower — it is thinking
Use it when	You will read and judge the output yourself	The reasoning itself is the deliverable

Quota is pooled across the university. Pro and Deep Research draw far more of it than Flash — reach for them deliberately.

Cost structure and safeguards

Confirmed by Google — billing sits with the university, not with you

- **Per-user licence, pooled quota** — the whole university draws on one pool, and there are **no overages**
- **Your data is yours** — never used to train Google's models or anyone else's, never sold, never used for advertising
- **Quotas reset daily at midnight Pacific** — that is **10:00 Kuwait time** in summer, **11:00** in winter
- Billed separately: BigQuery, the Agent Platform (formerly Vertex AI), any third-party connector

What to avoid

Avoid	Do instead
The free notebooklm.google.com	Enter through **ai.ku.edu.kw** — different privacy terms
Pasting many long PDFs into chat	Add them as sources in Notebook Enterprise
Trusting formulas, rubrics or grading logic blindly	Use Thinking mode, then check it yourself
Downloading files only to re-upload them	Just ask — connected sources are searched for you

Drive connector ceilings — **10 MB** most file types · **20 MB** .xlsx · **30 MB** .pdf · **100 MB** .txt

Pilot notice — for faculty

1. **Check what it produces** — fluent and usually helpful, but can be wrong or invent sources; verify before using it or passing it to students
2. **Your data stays yours** — connected content stays inside the University's environment, not used to train public AI models
3. **Keep your own copy** of any file you connect
4. **Share the student notice** before using it in class
5. **Tell us what breaks** — report via the pilot form (**bit.ly/ku-ge-rs**). Taking part is voluntary

Pilot notice — for your students

1. **Check what it tells you** — it can sound certain and still be wrong, and can invent facts and references
2. **Your work stays inside the University's environment**, not used to train public AI models — still keep passwords and personal, medical or financial details out of it
3. **Keep your own copy** of any file you upload — it is an assistant, not storage
4. **Academic integrity rules apply** — do not submit its output as your own unless your instructor allows it
5. **Tell your instructor** if something goes wrong. Using it is their choice
